

SATYAM CHOUDHARY

+91-0100668833 · iamsatyamc@gmail.com · [LinkedIn](#) · [GitHub](#)

Detail-oriented B.Tech student at KIIT with a strong foundation in data-driven systems, workflow automation, and end-to-end project execution. Brings an ownership mindset, sharp attention to detail, and a track record of independently building and shipping scalable technical products — eager to apply these skills to HR Operations at Vahan.ai.

CORE SKILLS & TOOLS

Data & Analytics: PostgreSQL, MySQL, REST APIs, data modeling, entity relationships, Google Sheets, Excel

AI & Automation: ChatGPT & AI tools for workflow automation, prompt engineering, repetitive-task streamlining

Process & Ops: End-to-end workflow design, status tracking, RBAC, stakeholder coordination, process documentation

Communication: Cross-team coordination, project documentation, structured reporting, async stakeholder updates

Dev & Tools: Java, JavaScript, React, Spring Boot, Git, GitHub, Postman, Figma, Spring Mail (SMTP)

PROJECTS & EXECUTION TRACK RECORD

Hospital Management System (HMS) | [Full-Stack](#) | [In Progress](#)

2024 – Present

React + Vite · Spring Boot · PostgreSQL · JWT · Spring Security · Spring Mail

- Architected a scalable enterprise system with layered Spring Boot architecture and PostgreSQL for persistent data storage — managing complex entity relationships across Patients, Doctors, Appointments, and Medical Records, mirroring the data modeling demands of HR Operations.
- Implemented Role-Based Access Control (RBAC) with ADMIN, DOCTOR, and RECEPTIONIST roles — building tiered access and protected routes that map directly to designing structured people-process workflows across stakeholder groups.
- Engineered end-to-end appointment lifecycle management (Scheduled / Completed / Cancelled) with monthly calendar view and real-time status tracking — demonstrating ability to own and coordinate complex multi-state workflows.
- Automated email notifications via Google Gmail SMTP for appointment confirmations and admin CC alerts — applicable directly to HR communication workflows, onboarding triggers, and stakeholder update pipelines.
- Built an analytics dashboard surfacing real-time KPIs across patients, doctors, and appointments — demonstrating ability to surface operational data as decision-ready insights for leadership.

WheelSwap — Peer-to-Peer Vehicle Marketplace | [Frontend + Backend](#)

2023 – 2024

React · Firebase · REST APIs · Figma

- Self-started and independently scoped, designed, and shipped a full peer-to-peer trading platform — from Figma wireframes to deployed product — demonstrating proactive ownership and end-to-end execution without external direction.
- Achieved a 30% improvement in page load performance through targeted frontend optimisation — reflecting a self-driven mindset to fix processes and build tools without being asked.
- Integrated Firebase Authentication and REST APIs to power real-time chat and listing flows, maintaining data consistency and keeping stakeholder-facing systems accurate and responsive.

EDUCATION

B.Tech (Computer Science) | [Kalinga Institute of Industrial Technology \(KIIT\), Bhubaneswar](#)

2022 – 2026

Intermediate / CBSE (Class XII) | [BD Academy](#)

2020 – 2022

High School / ICSE (Class X) | [ST. Joseph's School](#)

2019 – 2020

WHY HR OPERATIONS AT VAHAN.AI

I am drawn to Vahan.ai's mission to unlock economic opportunity at scale for India's workforce. My background in operational systems — spanning role-based workflows, automated communication pipelines, data dashboards, and end-to-end project ownership — maps directly to what this role demands. I actively use AI tools to reduce repetitive effort and increase execution speed, and I am eager to bring that execution-first, detail-oriented mindset into people operations from day one.
